

Custom Shipping Racks

Steel King

Strength. Innovation.

Integrity.

Steel King's reusable, returnable custom shipping racks are designed to meet the special requirements of manufacturers.

Shipping racks are manufactured to satisfy customer requests, including rigid, collapsible, or adjustable. Steel King will alter the size, dunnage, weight capacity, construction materials to make a shipping rack that fits your product. Our racks are structurally stable for up to 2- or 3-high shipping, and up to 6-high warehouse stacking.

In addition to their superior durability, fabricated racks, pallets and containers are more cost effective than wooden skids or throw-away containers made of cardboard or wood. They are also a more environmentally friendly solution.

Custom Shipping Racks

Steel King specializes in the design and production of a variety of fabricated steel storage products. Recognized as the industry leader, we offer proven expertise in solving unique storage and shipping problems through innovation and quality.

The Design Process

Steel King's product engineers are experts at analyzing your operational systems and processes relative to the parts you need to handle, whether for transportation, assembly, or both.

Our design department uses the latest CAD solid modeling software and techniques. We can design dunnage components either from CAD data or actual parts.

Industry Leader

Unlike smaller firms, Steel King's size and strength allow us to handle projects of any size or level of complexity. Our experience and advanced manufacturing capabilities ensure that your custom fabricated racks are built to the strictest tolerances in order to accommodate technological, ergonomic, and environmental challenges – whether you require one or one thousand units.

Prototypes can be produced in a number of methods depending on the production material choice.

"Steel King took the time to understand exactly what we needed – designed around our custom components."

Steel King is Built to Deliver.

Many of the world's most prestigious manufacturing, construction, and distributing companies rely on Steel King for custom-designed, custom-fabricated material handling products.

Density Maximization

- Efficient stacking of parts
- Fold down for lower return cost
- Multiple use racks for various parts

Safe Transport and Storage

- Cushioning of parts while being held firmly in place
- No loose parts during shipping
- Built to withstand transportation
- Engineered for safe handling
- Heavy duty construction – designed to be stackable, if required

Ergonomic

- Light weight designs, yet strong and durable
- Multiple fork access points

FEATURES | OPTIONS

- Folding columns
- Fork tubes
- Gas springs
- Removable columns
- Straps
- Custom dunnage
- Casters
- Bags
- Paint / galvanize
